

Dear Friend

Dear Friend

My Dear Friend is a short poetic interactive story for iPad exploring intimacy, memory, and care through a simple digital gesture: deleting files from someone else's computer.

Set in an intergenerational co-living building, the experience follows Camille, a student helping an elderly resident, Anna, free space on her computer. What begins as a quick task meant to fit between exam revisions slowly becomes an emotional encounter. While browsing through folders, messages, and personal files, Camille discovers that Anna recently lost a close friend through assisted suicide with the support of the organization Exit.

As the player deletes files from Anna's computer, they are confronted with questions about memory, respect, and emotional responsibility. Is caring for someone helping them let go, or preserving what remains? What traces of a life should be kept, hidden, or erased?

Presented through a semi-realistic 3D visual style, the project offers a quiet and intimate experience focused on observation, hesitation, and emotional proximity.

User Journey

The visitor discovers an interactive story on iPad and follows Anna through a series of intimate narrative moments. By touching, exploring, and interacting with the environment, the user gradually uncovers fragments of the story through animations, sound, and dialogue. The experience unfolds at the visitor's own pace, encouraging curiosity, attention, and emotional engagement. Depending on the choices they make, Anna's emotions might change and the zooming will adapt accordingly.

Final Production

If selected for exhibition, additional production would focus on improving the narrative immersion and overall audience experience of the interactive iPad story. Planned additions could include:

- story adjustments to better fit the exhibition context
- visual polish and interface refinement
- voice acting integration
- Anna's additional animations and interactions
- adjusting the rhythm and timing of animations
- sound design adjustments to fit artistic direction
- expanded storytelling moments (2 maximum)
- technical optimization for exhibition use

These additions would remain within a reasonable production scope while significantly enhancing the final presentation quality.
